Check protective gloves prior to each use for their proper condition. The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation - Material of gloves Find below a list of appropriate protective gloves for chemical surrounding: Permeation time / penetration time: = 480 minutes (DIN EN 374): Naturlatex I, Nr. 0395 oder 0403 Chloropren Nitril I, Nr. 0727 Nitril I, Nr. 0730, 0732, 0733, 0736, 0737, 0738, 0739 oder 0836 Viton, Nr. 0890 Butyl II, Nr. 0897 Butyl, Nr. 0898 Permeation time / penetration time: = 240 minutes (DIN EN 374): Chloropren Nitril II, Nr. 0717 Nitril VI, Nr. 0754 Nitril V, Nr. 0764 of KCL company (e-mail: vertrieb@kcl.de). The recommendation is based exclusively on the chemical compatibility and the test according to EN374 under laboratory conditions. Requirements can vary according to the use. Therefore, please always take into account the glove supplier's recommendations. The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. - Penetration time of glove material The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed. - Eye protection: Avoid contact with the eyes.
